Infectious disease				
(culture or molecular pathology)	AGE	VALUE	CONDITION	
GRAM STAIN	ALL	All positives on sterile body sites/fluids to include: Blood CSF and Ventricular fluid Synovial fluid Serous fluids - pleural, peritoneal, pericardial Bone Marrow Biopsy	(Excludes urine, gastrointestinal fluid and Bronchial lavage). Include source and site when calling critical values.	
CULTURE	ALL	All positives on sterile body sites/fluids to include: Blood CSF and Ventricular fluid Synovial fluid Serous fluids - pleural, peritoneal, pericardial Bone Marrow Biopsy	(Excludes urine, gastrointestinal fluid and Bronchial lavage). Include source and site when calling critical values.	
BLOOD CULTURE	ALL	POSITIVE	Each positive set within a series needs to be called. For subsequent positive blood cultures in the same set that demonstrate the same organism, verify that the initial was called and document that a previous positive in the same set was called. If the second bottle in the set demonstrates a different organism in the Gram Stain, this result needs to be called.	LIVE DATE: 6/1/24
